Everything seems fine except my Focusrite Saffire Firewire audio interface will no longer work.. On my HP Windows 10 machine, that is about 4 years old, with a store bought (Fry's Electronics) FireWire card, Vegas Pro doesn't recognize any attached devices.

It worked fine under Windows 7 I've installed the legacy 1394 OHCI Compliant Host Controller, uninstalled and reinstalled the driver for the device.. The device is connected and getting power I've read conflicting reports about Windows 10 firewire support.. Everything seems fine except my Focusrite Saffire Firewire audio interface I upgraded to Windows 10 yesterday.. During the driver installation it prompts me to connect the firewire cable to the device.. Any ideas? Thanks [Run Ios Apps On Mac Emulator](#)
